

Case Study: Logistics industry

Williams Logistics Business Pickup

The challenge

Williams Logistics is Australia's leading specialist provider of third-party logistics, warehousing, distribution, e-commerce fulfilment, inventory management and total service solutions.

Williams Logistics' mission is to "change the industry for the betterment of its people and the planet."

As part of this, Williams Logistics have made conscious decisions to implementing sustainable practices at their warehouse, which includes a comprehensive waste management plan to minimise their landfill and CO2 emissions.

Williams Logistics Business Pickup

The solution

Williams Logistics set up a dedicated collection cage for soft plastics. This dedicated cage ensures no contamination occurs.

Every day, employees place the soft plastics bags produced from their operations, in the collection area.

Every week, the ReSmart driver empties the cage and takes away the resources to be recycled.

The results

In just 5 months, Williams Logistics has saved:

3,513 kg

of valuable resources
from landfill

449,664 kg

of CO2 emissions

“ReSmart has transformed how we handle soft plastics from our operations. It’s comforting to know that plastic from our operations are being recycled, making it easy for us to reduce our landfill contributions.”

Mary – Williams Logistics
